

When You Winterize Your Pool, Winterize the Pump with ...

PUMP PROTECTOR

- One can will Winterize most pumps
- Unaffected by freezing temperatures
- Because it is water-soluble, no special rinse is required at start-up

**10 oz. aerosol can
Part Number 4299-T8**

When winterizing your pool, don't just drain the water and leave the pump unprotected. Oxygen and moisture can cause corrosion that can lead to pump binding and failure at next year's start-up.

Winterize your pump with FOAM-in protection that will last all winter long . . . with Pump Protector. Its exclusive blend of corrosion inhibitors and lubricants expand rapidly into a foam that fills every void and all close-tolerance areas of your pump. When the foam disappears, a durable film is left behind to lubricate and protect all internal surfaces of the pump, assuring trouble-free start-up next season. Additionally, it will prevent corrosion that would otherwise cause pump binding and failure.
