

Left untreated, condensate pans can suffer from the build-up of sludge, scum and other accumulations. This build-up can cause odors as well as plugged drains and overflows, which in turn result in water damage. Pan-Treat is formulated with ingredients proven effective in cleaning and preventing these deposits, and its use will eliminate the extra maintenance cost associated with odors, plugged drains and overflows.

Pan-Treat is extremely easy to use, and it is safe, non-corrosive to metal, non-toxic, and biodegradable. The product is completely soluble in water and it does not form any deposits in the pan and drain.

DIRECTIONS FOR USE:

This product must be used in accordance to the following directions by HVACR professionals only.

CONDENSATE PANS: If the pan is noticeably fouled, it can be cleaned by using two or more Pan-Treat tablets per ton of system capacity. Repeat until system is clean. For subsequent treatment or clean condensate pans, use one Pan-Treat tablet per ton each month. Position the tablets away from the drain and where they will achieve maximum contact with dripping condensate. This will assure more complete cleaning action and treatment. For larger systems, where the use of many tablets may be impractical, use Nu-Calgon's PanPads® condensate pan products.

HUMIDIFIERS: Pan-Treat tablets can be used to condition humidifier water in order to prevent odors and deposit build-up. Use 2-4 tablets every four to six weeks as needed. Clean and rinse out the humidifier reservoir on a regular basis.
